SUMMARY

Data Science professional with a strong foundation in Mechanical Engineering, Project Management and 5+ years of industry experience in Validation & Verification in Pharmaceuticals and Diagnostics. Graduate of the TripleTen Data Science, ML & AI program. Experienced in machine learning modeling, statistical analysis and leveraging key AI-guided tools to drive innovation, create business growth and transform complex big data into impactful solutions

SKILLS

Data Science: Python, R, SQL, EDA, Data Visualization, Statistical Analysis, Hypothesis Testing, Data Storytelling
Machine Learning: Regression, Classification, Clustering, Feature Engineering, Model Optimization and Evaluation
Deep Learning: Neural Networks, Keras, Natural Language Processing, Transformers, LLMs, OpenCV, Agentic AI
Validation Expert: Project Management, Quality Control, Root-Cause Analysis, pFMEA, Technical Documentation
Systems: Jupyter, VS Code, PyCharm, PyTorch, TensorFlow, GitHub, SAP, AWS, Snowflake, Streamlit, PowerBI

EXPERIENCE

Data Analyst Extern | Insight7

Nov 2025 – Dec 2025

TripleTen Externship

- Conduct exploratory data analysis on student and coach sessions to analyze effectiveness of coaching calls on student progress and identify low-impact calls to streamline scheduling and improve session productivity.
- Present findings to stakeholders outlining critical insights such as benefits of early intervention coaching and the increased call frequency during milestone sprints on student progress enabling refined support strategies.

Data Science Student | TripleTen Bootcamp

Feb 2025 – Oct 2025

Data Science, Machine Learning & AI

- Completed an intensive 8-month Data Science program developing advanced proficiency in Python, statistical analysis, data cleaning, visualization, NLP techniques by performing EDA on 100K+ rows of real-world datasets.
- Built and optimized 25+ machine learning models across regression, classification, clustering and neural networks producing 15+ insight-driven project reports that identified key trends and provided recommendations.

Equipment Cleaning Validation Engineer | Roche Molecular Systems

Aug 2022 – Present

Doing Now What Patients Need Next

- Execute validations of cleaning methods for manufacturing equipment by evaluating product risks, analyzing historical data and leveraging established validation strategies to drive innovation while prioritizing safety-first.
- Author technical validation documents, collaborate with cross-functional teams to review and approve protocols and develop insightful reporting for project leadership to meet global regulations and support business growth.

Learning & Development Expert | Roche Molecular Systems

Dec 2022 – Present

Training Matrix Admin

- Manage departmental matrices and curricula, build data-driven reports and ensure organizational compliance.

Process Validation Engineer | Roche Molecular Systems

Feb 2020 – Aug 2022

Branchburg, NJ

- Developed IQ/OQ/PQ protocols and reports based on business needs and proven scientific methodologies to support continuous improvement, mitigate product risks and ensure compliance with global industry standards.

PROJECTS

Data Science – Sales Forecast

- Performed EDA to identify trends and deployed a web app to a cloud service for interactive data visualization.

Machine Learning – Computer Vision

- Evaluated GPU-trained models on their ability to detect underage alcohol consumers using facial recognition.

Deep Learning – Song Popularity with PyTorch

- Built MLP Neural Networks to assess the extent to which audio features alone can predict a song's popularity.

EDUCATION

Data Science, Machine Learning & AI Certification | *TripleTen Bootcamp*

Oct 2025

Certified Quality Process Analyst | *American Standard of Quality (ASQ)*

Aug 2021

Master of Science in Engineering Management | *New Jersey Institute of Technology*

Dec 2019

Bachelor of Science in Mechanical Engineering | *Rutgers University – New Brunswick*

May 2017
